

# GIN SELECTION

## A BRIEF HISTORY OF GIN

Gin, a spirit which derives its predominant flavour from juniper berries, has evolved over the course of hundreds of years from a herbal medicine to one of the most popular spirits amongst our members.

From the early 17th century troops fighting in the low countries during the Thirty Years' War looked to gin for Dutch courage during long campaigns, and to keep them warm in the damp and difficult conditions. Many of the troops brought gin back into England. In the 1660s the famous diarist Samuel Pepys wrote of "strong water made with juniper" that was used as a treatment for colic; although whether this was for his own ailment or for infants remains unclear.

When King William III, better known as William of Orange, came to the English throne in 1689, he actively encouraged the distillation of English spirits. The distillation process took place on a small scale, and though the quality was below average it fast became a popular tippie of the working classes. On the odd occasion gin was distributed to workers as part of their wages and soon the volume sold daily exceeded that of beer and ale, which was more expensive.

The 18th century saw laws passed and gin being taxed and made available for sale only in public houses. Gin was transformed from a beverage of escapism for the working class to one of moderation for the middle class.

During the 19th century, the quality of gin progressed into a new league. Prior to this, gin bore no resemblance to the gins of today; it was a thick, sweet, full, rich drink with heavy juniper notes. With improvements in both the understanding and quality of distillation of gin there was no longer a need for sugar and glycerine to mask the rank spirit.

Gradually, it became drier, with delicate, complex flavors introduced courtesy of a wide range of exotic botanicals; more like the drink we know today.

It became known as 'London Dry Gin' simply because most distillers were based in the capital. There has never been a requirement to be geographically connected to London; the term then referred to a style, which later became a defined production method.

Today, gin is one of the most popular and widely distributed range of spirits and is represented by products of various origins, styles and flavours that all revolve around juniper as a common ingredient. Typically, a fine gin contains between six and ten botanicals.

Please note that the following drinks are suggested combinations. We are happy to cater to your preferences. Please let a member of the team know if you require a different garnish or an alternative tonic (see "Available Tonics" at the end of this section).
